

Patsystems XLink

Connecting you worldwide

Need cross-platform exchange access?

XLink is Patsystems' unique software solution that promotes exchange connectivity throughout our global trading community. XLink allows Patsystems' customer to leverage one another's exchange memberships without the need for expensive memberships or additional exchange gateways.

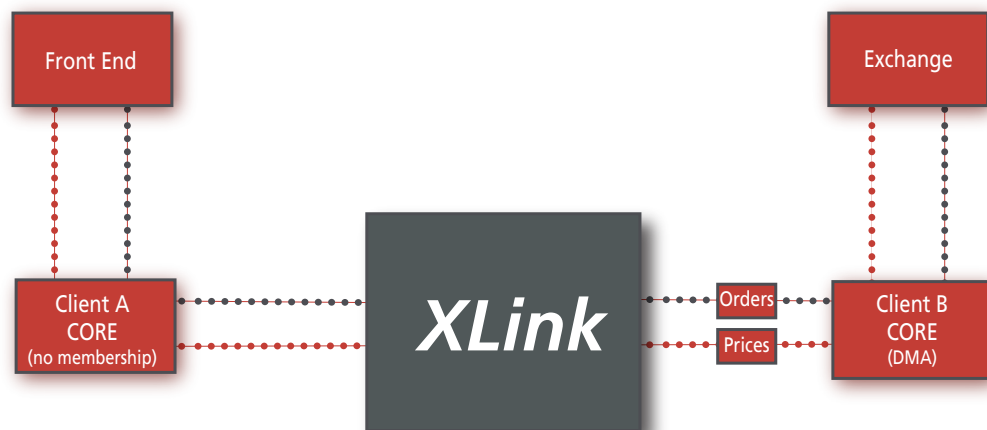

Patsystems' Technology Bridge

XLink bridges can connect Patsystems' trading systems wherever they are installed. For example, a company could utilise Patsystems XLink network to connect their system in Chicago to their system in London. Alternatively, two completely different organisations could utilise the network to connect a system in Brazil to a system in Singapore. Whatever the relationship, XLink allows users to access remote exchanges that would otherwise be inaccessible.

Key benefits of XLink include:

- Choice of clearers for the world's leading markets
- Straightforward system for easy implementation
- Full support for order types and risk management configurations

The XLink software runs on a local server and routes orders seamlessly from the originating company to the receiving company. XLink runs across a LAN, WAN, leased line or the internet and offers all the advantages of pre-trade risk management, speed of access and straight-through processing that Patsystems provides.

About Patsystems

Total FlexAbility

We deliver tailored solutions, built from modular components, to enhance derivatives trading performance and trade processing. Our solutions can range from a plug-and-play module to address a specific issue, to complete high-performance trading systems with global access to an extensive list of key exchanges.

We work in partnership with our customers to deliver robust systems that align with their business strategies – and have done so since our foundation in 1994.

Numerous leading banks, trading houses, hedge funds and professional traders around the world rely on Patsystems' technology for electronic trading in derivatives, FX, energy and other asset classes.

Key Business Areas

Trading Solutions

- Powerful front-ends, API and exchange connectivity to enable trading across all major futures exchanges and liquidity pools.

Risk Solutions

- A standalone, platform independent risk management system that calculates risk across multiple asset classes in real-time.

Exchange Solutions

- End-to-end exchange and back office solutions that automate all steps in the trade cycle from front to back office.
